LE: 1990; V: 09/15 PC.4H

TEST PERFORMED: UFAC Fabric Classification Test Method 1990  
Cigarette Ignition Resistance of Fabric Intended for Use in Upholstered Furniture

RESULTS:	TEST	RETEST (If Required)	
Specimen #	Ignition (yes/no/SE)	Char Length on Vertical Panel (inches)	Char Length on Vertical Panel (inches)
1	SE	0	0
2	SE	0	0
3	SE	0	0

ABBREVIATION WHICH MAY BE USED:  
  
SE = Indicates that the cigarette self-extinguished prior to burning its entire length. When this occurs, a "retest" of that specimen is performed.  
  
EC = Escalating combustion. Specimen extinguished by technician. No char length measurement taken.

CLASSIFICATION SYSTEM:  
  
Class I - For each specimen: No obvious ignition; char length less than 1.75".  
(Indicates propensity to resist cigarette ignition in conjunction with standard foam filling material.)  
  
Class II - For any specimen: Obvious ignition or char length 1.75" or greater.  
(Indicates inability to resist cigarette ignition in conjunction with standard foam filling material.)

RETEST PROVISION:  
  
Applies only to cigarettes that self-extinguish. It does not apply to specimens which ignite or have a char length of 1.75" or greater.

CONCLUSION: Based on the above Results and Criteria, the item tested is assigned a:  
  
 Class I rating;  Class II rating

REMARKS: None.

COMMENTARY: The cigarette ignition source used in this test conforms to the physical parameters set forth in the test standard. The actual propensity of the cigarette (that is currently manufactured) to cause ignition of materials under test might be different than the cigarette that was manufactured at the inception of the test standard.

CERTIFICATION: I certify that the above results were obtained after testing specimens in accordance with the procedures and equipment specified above.
