RE: Research, Evaluation, Authorization and Restriction of Chemicals (REACH) Compliance

To Whom It May Concern:

Uniroyal's vinyl products are compliant with REACH based on the requirements as of the date of this note. Levels were determined by review of MSDS of raw materials and mass balance. Only one Substance of Very High Concern (SVHC) is used for making our vinyl product. That SVHC is destroyed during processing of our vinyl products. A few products with the highest level of this SVHC were tested for the level of the SVHC in the finished product. The tests show that the products were REACH compliant for this SVHC. The vinyl was not tested for other SVHC compounds.

I certify that the above statement is true and correct to the best of my knowledge.
